FILED TO DDETROIT, Dec. 29—In a development that will have wide application in the automobile industry, General Motors says it will be ready for the first time in 1936 to produce Model GOMARs for its own use. Although GOMAR has been on the market for the past five years, it has not been publicly available for the first time in 1936. The GOMAR was developed by the General Motors Research Laboratory in New York City in 1919 and is the first practical motor car for passenger use. It is a gasoline-powered vehicle and has a top speed of 60 miles per hour. The car is equipped with a four-cylinder engine and has a fuel economy of 25 miles per gallon. The GOMAR is also noted for its handling and braking capabilities, and it has been praised for its reliability and durability. The car is expected to be available for purchase in the coming months.
