Participate in a Research Study Examining Infant Feeding

Who?
BABIES age six months or younger.

What and Why?
If eligible, we will non-invasively measure your baby's feeding cues before, during, and after their regular feeding.

Our goal is to identify cues that tell us when infants are ready to feed.

Where and When?
Visit our lab at Northeastern University.

We will provide free parking for all participants.

To be involved contact:
The Speech and Neurodevelopment Lab at (617) 373-4670 OR Thompson.kels@husky.neu.edu
