Participate in a Research Study Examining Pacifier Properties and their Effect on Infant Sucking Patterns

Who?
Healthy BABIES, age six months or younger.

What and Why?
If you are a parent/guardian at least 18 years of age, we would like to non-invasively measure your baby's sucking responses to various pacifiers.
We hope to identify the best pacifiers to promote appropriate sucking patterns in infants.

Where and When?
Visit our lab at Northeastern University. The study will take approximately 1 hour
We will provide free parking and an infant gift for all participants.

To be involved contact:
The Speech and Neurodevelopment Lab at (617) 373-4670 OR
